Prof. Mamun's Personal Meeting Room 2026-07-17 08:14(GMT+6:00)

Key Outcomes

The session combined an introductory research methodology lecture with student mid-term presentations and a broad motivational discussion on AI, Bangladesh's development context, and entrepreneurial mindset. The professor emphasized that authentic, data-driven decision-making is critical for Bangladesh's progress, and that students must develop AI competency, innovative problem-solving, and a business mindset alongside their degrees. [1] [2]

Decisions Made

- Course materials (lectures, recordings, assignments) are hosted in a shared drive/Kurba folder; students directed to WhatsApp channel for access links [3] [4]
- Lecture 5 designated for **sample research paper presentations** [5]
- An ex-student will be invited to present the **PRISMA method** in a future lecture [6]
- Student lab visit (IRC/AIMC innovation lab) to be coordinated by **Mr. Sadiq** on a Saturday [7]
- **Free AI tools** must never be used with personal/sensitive data — data is retained and used for model retraining [8]

Key Topics Covered

AI History & Landscape

- AI timeline: 1950 (birth), 1956 (John McCarthy coins term), Expert Systems (1986), Deep Learning revolution, GPT-3/ChatGPT era [9] [10]
- Near-future AI directions: physical AI/robotics, scientific discovery, human-AI augmentation, AGI [10]
- Products highlighted: IBM Logic (1956), Siri, Netflix, DeepMind, ChatGPT, Claude, Agentic AI [11]

Bangladesh & Data-Driven Development

- Core problem identified: decision-makers rely on perception rather than **authentic, data-driven decisions** [1]
- Bangladesh generates data every millisecond but lacks capture infrastructure and political will [12]
- 2025–2030 framed as **highly critical years** for Bangladesh's trajectory toward a $150B market [12]
- Opportunity cited: Bangladesh's IT/garment sectors losing ground to Vietnam and India due to ecosystem gaps [13]

Research Methodology Orientation

- Research defined as a **set of processes**: problem definition → protocol design → implementation → discipline [8] [14]
- Critique of Bangladesh academia: most research is motivated by **promotion**, not societal or industry problem-solving [15]
- Authentic research purpose: solve existing problems, review existing knowledge, generate new solutions for society and industry [15]

Mindset Framework

- Three required competencies stressed: **AI-enabled**, **innovative problem-solving mindset**, **business attitude** [2]
- Shift needed from clerical mindset → entrepreneurial mindset (innovator, scientist, value creator) [16]
- Degree alone insufficient — **skill development** is the differentiator for career outcomes [17]
- Business mindset reframed: not taboo — universities, employers, and researchers all operate within revenue-dependent systems [18]

Q&A Highlights

- **Q (Fahim):** Current Bangladesh situation (HSC-related disruptions) impacting research — how to address? → **A:** Problem stems from lack of data-driven decision-making; policy, AI strategy, and regulation are the three required responses. [19]

- **Q (Fahim):** Data privacy concerns when using AI tools? → **A:** Bangladesh needs AI policy, AI strategy development, and AI regulation; never use personal data in free AI tools. [8] [19]

Pending Confirmation

- Exact schedule for lab visit with Mr. Sadiq (Saturday timing to be confirmed) [7]
- Recording upload process: professor recording locally and uploading due to cloud storage limits [20]
- Lecture 2 content: theoretical framework to be covered next session [8]

Action Items

- **Prof.:** Upload all presentation slides and lecture recordings to shared drive folder [13]
- **Prof.:** Invite ex-student to demonstrate PRISMA method in upcoming lecture [6]
- **Mr. Sadiq (Coordinator):** Arrange Saturday lab visit for students [7]
- **Students:** Avoid using personal/sensitive data in free-tier AI tools [8]
- **Students:** Prepare for mid-term presentations; request feedback via presentation submission [21]
