Expert Check: Cloud Forensics in Bangladesh

Short questionnaire (about 5 minutes) | anonymous, for a university research paper

Thank you for helping. The paper proposes a roadmap (AI-CFRF-BD) for handling cloud evidence in Bangladesh. The roadmap is a proposal and has not been tested. Please rate each statement from 1 (strongly disagree) to 5 (strongly agree). Your answers will be summarised without names.

Your role: ☐ Police / investigator ☐ Prosecutor / lawyer ☐ Judge / court staff ☐ Cyber or IT professional ☐ Academic ☐ Other: _____

#	Statement	1	2	3	4	5
1	Logs held by cloud providers are often deleted before an investigation starts.	☐	☐	☐	☐	☐
2	A court order or preservation order is hard to serve on a foreign cloud provider.	☐	☐	☐	☐	☐
3	There is no clear model Section 65B certificate for cloud records.	☐	☐	☐	☐	☐
4	A day-one checklist (preservation request, original export with hash, certificate request) would help investigators.	☐	☐	☐	☐	☐
5	Public bodies should copy key audit logs to storage they control.	☐	☐	☐	☐	☐
6	Rules under the cyber law on cloud forensics would be useful.	☐	☐	☐	☐	☐
7	AI tools may be used to find leads in logs, if a human analyst checks the result.	☐	☐	☐	☐	☐
8	Courts would accept the original log with its hash and certificate, not the AI output.	☐	☐	☐	☐	☐
9	Investigators and prosecutors need more training on cloud evidence.	☐	☐	☐	☐	☐

Which one step should come first? ☐ Preservation order reach ☐ Model 65B certificate ☐ Cloud forensic rules ☐ Log export by public bodies ☐ Training ☐ AI pilot

Anything missing or wrong in the roadmap?
